Narmada Auto Plastics

Vadodara, Gujarat · BALANCED COST · CONTROLLED PILOT

All supplier names, locations, prices, experience claims, and offers in this document are invented for classroom learning. They do not represent actual companies or real commercial offers.

Product & requirement

Pravaah P1 is a fictional small hatchback created only for this classroom exercise. The buyer requests a four-piece, black, molded TPE cabin floor-mat set (two front and two rear mats), compatible with a buyer-supplied floor template and retention-point sample. The set should have an anti-slip underside, a raised edge, a reinforced driver's heel zone, no sharp edges, and no interference with pedals or seat movement. Supplier fitment and material claims are illustrative and require buyer validation.

Product and process proposal

Virgin TPE, nominal 3.0 mm body, black matte grain, 10 mm raised edge, molded anti-slip ribs, and a 2.5 mm heel reinforcement. Retention windows match the buyer's sample clips. A small colour chip and one set of material coupons will be submitted with first articles.

Tooling and fitment plan

Tool drawing review in week 1, soft-tool sample by day 15, fitment trial by day 18, and pilot release after signed approval. Two fitment correction loops are included. Tool ownership transfers after payment; quarterly preventive maintenance is included for year one.

Commercial quotation

Item	Offer
Product	4-piece TPE floor-mat set for Pravaah P1
Unit price	INR 965 per set, before GST
One-time tooling	INR 3,80,000
First sample / pilot lead	21 calendar days to approved sample; 25 days to pilot
Monthly capacity	10,000 sets/month

Payment, GST and freight assumptions: 40% tooling advance, 60% after approved sample. Product payment net 30 days after accepted delivery. GST extra; freight to buyer plant estimated at INR 35/set. Quote valid for 60 days; resin price reviewed if polymer index changes by more than 8%.

Quality controls and compliance evidence

Narmada proposes an approved sample record, go/no-go fitment gauge, first-piece inspection, 5-piece hourly visual and dimensional sampling, batch labels, and a simple corrective-action log. Material lot certificates are retained for 2 years. The proposal includes a 20-set pilot approval gate before the 200-set trial lot.

Delivery and capacity

The requested planning case is a 20-set fitment sample, followed by a 200-set pilot, then an indicative 10,000 sets/year. Forecast volumes are non-binding until purchase order release. Supplier-stated monthly capacity is 10,000 sets/month. The quoted lead time is 21 calendar days to approved sample; 25 days to pilot. Buyer approval is required before production release.

Warranty and supplier support

12 months from delivery for material or workmanship defects. Acknowledge in 1 business day, initial containment within 48 hours, and replacement within 7 working days after claim approval.

Company experience

The fictional company profile describes nine years producing molded interior and under-bonnet polymer parts for Indian vehicle programs. A quality engineer is assigned to the pilot and monthly supplier reviews are offered.

Open points for negotiation

Before award, buyer and supplier should sign off the fitment template, compound grade, thickness tolerance, retention features, packaging, final freight location, GST treatment, acceptance sampling, warranty start date, tool custody, and approved sample. No claim in this fictional quotation has been audited or independently verified.

Quote validity

This synthetic offer is valid for 60 days from 18 October 2026 for comparison practice only. Actual commercial terms would require a formal purchase order and contract.

END OF FICTIONAL QUOTATION
